***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I.     Claims 1-17, drawn to an interferometer, classified in class 356, subclass 450.
- II.    Claims 18-21, drawn to a thermo-optic modulator, classified in class 359, subclass 288.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case while the interferometer is related to measuring light signals, the thermo-optic modulator is related to compensating for thermal activity in optical components.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
